# Automation System KEB COMBICONTROL C6

**KEB COMBICONTROL C6** is the new line of motion control solution, focussed to high dynamic drive orientated applications.

Scalable and tailored for dedicated tasks in OEM machines and systems. The embedded or IPC based control platform utilizes state of the art user free programmable IEC 61131-3 software with the latest solution and utilities offered by the CoDeSys V3 core and .net based software tool **KEB COMBIVIS studio 6**.

## **KEB COMBICONTROL C6-COMPACT**

Is the embedded solution for smaller machines and best choice for economical sub-control concepts with motion applications.

## **KEB COMBICONTROL C6-PERFORM**

Is structured as a high performance IPC platform in single chip version, or Core™2 Duo chipset configuration for integrated motion control and visualization in one hardware package. Both types are available in BOX-IPC and PANEL-IPC from 12" to 17" high resolution touch screens. This offers the high end motion and CNC control functionality.

## **KEB COMBICONTROL C6-ECON**

Offers a medium size IPC performance and the basis for most standard typical machine control tasks. Depending on the requirements of the mechanical installation the C6-ECON is available as a compact Box-IPC or integrated Panel IPC with 8" to 17" size touch screens.

## **KEB COMBICONTROL C6-VISU**

Is the IPC based visualization solution with economic touch screens ranging from 6" to 12" utilizing CoDeSys Target ViSu/3S or PremiumHMI high end visualization software packages.

Constructed on powerful drive solutions for single and multi-axes applications KEB offers in addition the complete automation level for dynamic motion control tasks.

The main goal of the KEB automation philosophy is the cooperation with OEM builders in the development of bespoke and worldwide competitive machine control concepts.

Application design and software engineering is supported by a team of technicians and engineers, who have a large amount of experience gained through solution integration with major machine builders in all areas of control automation, where future solutions are with-out limits and know-how is in the customers hands.

# C6

## COMBICONTROL C6

# KEB COMBICONTROL C6 COMPACT

The efficient and compact drive orientated control for machine automation.

Based on the integrated EtherCAT master protocol the **KEB COMBICONTROL C6-COMPACT** offers high speed serial communication for multi axis operation with invert or servo drives.

Digital and analogue inputs and outputs signals in addition to the onboard I/O can be directly connected via the EtherCAT system bus, with the modular and pluggable KEB Remote I/O system.

Point-to-point communication the HSP5 ports offers parallel serial bus communication with up to 4 **KEB COMBIVERT F5** inverters operating in open, closed and servo operation at nearly "no cost".

# C6-COMPACT

Technical data	
voltage	18 ... 30 V DC
power	3 W
code + data / retain	32 MB / 32 kB
dimension (W x H x D)	44 x 125 x 144 mm
weight	0.3 kg
assembly	35 mm DIN rail mounting
operating temperature	-10 ... 45 °C
storage temperature	-25 ... 70 °C

C6-COMPACT hardware	part no.
embedded, 24 V DC, Soft-PLC	00C6.BA1-AAA0
embedded, 24 V DC, SoftMotion/CNC	00.C6.BA1-AAB0

Fieldbus versions	part no.
Profibus DP slave	00.C6.BA1-BAx0
CAN slave	00.C6.BA1-CAx0
Interbus slave	00.C6.BA1-DAx0

The structured and compiled format of the control software means there is no need for any operating system freeing up full system resources for the main Soft-PLC and SoftMotion tasks.

This makes the **KEB COMBICONTROL C6-COMPACT** very efficient and powerful in operation as a sub-control system below standard PLC's, simple to network with the field bus options for

- Profibus
- CAN
- Interbus
- Ethernet.

Most cost efficient is the fully handling of automation task in combination with the well performing KEB drive range for all kinds of asynchronous or synchronous systems.

Serial interfaces	Onboard I / O's
1 EtherCAT Master	4 Digital IN (one high speed: 100 µs)
1 Ethernet 10/100 Mbit/s, Modbus TCP	4 Digital OUT (24V transistor - 0.7 A)
1 RS 232/485, DIN 66019, Modbus RTU	1 24 V DC Input
4 KEB HSP5, cyclic communication to F5 drives	

... easy to use with connection via MODBUS-RTU or RS 232 interface ...

HMI display for processing of parameters or to operate as a user interface.

**3" graphic terminal** with 25 function keys, monochrome 160x80pixel, **part no. 03.C6.AF2-00J0**

First upgrade in size and performance is the **4" touchscreen display** with standard Ethernet connection, 32 greyscales and 480x272 pixel **part no 04.C6.AF2-30J0**

**KEB COMBICONTROL C6-VISU** offers further solutions in size and functionality.

# KEB COMBICONTROL C6 ECON

## Box IPCs

The new **KEB COMBICONTROL C6-ECON** family was designed to provide a wide range of scalability in performance and functionality.

Based on the operating system Windows® XP embedded, "CoDeSys RTE" and designed with the "all in one" ASEM951 motherboard including Intel® Celeron® M ULV -1 GHz and 915 GM Express, the hardware starts with the Box-IPC as base version, mainly preferred in all mechanical installations with external monitor placement via VGA port.

# KEB COMBICONTROL C6 Remote I/O System

Analog and digital - For all additional input and output handling in automation solutions the **KEB Remote I/O** brings real time serial communication into the I/O level.

The system operates direct via EtherCAT bus communication into every single device and secures highest speed and performance with smallest space requirement.

Designed in a standardized 25 mm aluminium based frame with strong EMC performance every bus coupler module can operate up to 20 remote I/O-modules.

# Remote I/O

With up to 3 amp power consumption many different analog and digital module combinations can simply be connected and mounted on a standard 35 mm DIN Rail system.

Pluggable high density spring-type terminals on all modules allows simple change in operation and easy cabling.

Strong EMC shielding and effective cord grip is ensured by the shielding plates.

**KEB Remote I/O** supports the decentralization of machine concepts and improves the modular manufacturing and set-up process.

## Engineering tool

The general requirements for technical solutions are continuously increasing and the engineering environment is an important key factor for powerful and efficient design results.

With **KEB COMBIVIS studio 6** a new platform is prepared, where .net based applications are linked into one central tool with high end functional integration.

Demo version of **KEB COMBIVIS studio 6** software is available for registered customers under [www.keb.de](http://www.keb.de).

# COMBICONTROL

From the selection and installing support for single and multi axis drives over the EtherCAT fieldbus configuration up to the functional programming of soft-PLC, motion control and CNC - one tool with many integrated functions.

With special wizzard templates the software simplifies the adaption of servo motors or connect the predesigned fieldbus concept with additional modules of the Remote I/O system.

Optimization of control loops is supported by a fully digital scope with 16 channels.
